

This is a crypto currencies informer bot in Telegram that notifies you when the cryptocurrency you have invested in surpasses a target price you have stated in the chat. You access it via /start command and to track a certain currency you enter the /alert command followed by the crypto sign in capital letters , an operator either "> or <" and a target price (eg. /alert ETH > 1815). It will then send you an alert message when the price reaches that target.
